EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Robert Smith on October 9, 2008.

The application has been amended as follows: In the Claims:

In Claim 8, line 2 after "an additional step, (x) delete "any one of: providing hydrogen for a liquid fuel cell; satisfying electrolyte requirements in a battery; a battery electrolyte wherein the greater redox potential of the H904+ presents a greater battery voltage.; replacing mineral acids in pH adjustments whereby accumulation of anions associated with the mineral acids is avoided; replacing any one of nitric acid and muriatic acids in pretreating steps in electro- and electroless plating; applying said H904+ compound in biological processes where non reactive properties with organic tissue are required" and insert therein --substituting said H₉O₄⁺ compound as a replacement for hydronium ion in a group of applications which consist of pH adjustment, antiseptic solutions, liquid fuel cell, batteries having a sulfuric acid electrolyte and including as a replacement for nitric acid and muriatic acid in metal plating--.

The following is an examiner's statement of reasons for allowance: none of the prior art of record fairly discloses or renders obvious the claimed method including the steps of subjecting pure water to at least one of mechanical agitation and magnetic

perturbation, mixing reagent grade sulfuric acid in said pure water and agitating said reagent grade sulfuric acid in said pure water, adding a compound of calcium to form Ca^{2+} in solution, electrolyzing the formed calcium solution to electrolysis to form Ca^{3+} solution, adding said formed calcium ion to the sulfuric acid solution to precipitate calcium sulfate, removing the formed sulfate, lowering the temperature to form a slush and removing the formed ice from the solution followed by distillation to remove free water.

It is known in the art to remove sulfate ions by the use of calcium compounds, however, none of the prior art references teach the additional steps as claimed. Accordingly, the claims are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arun S. Phasge whose telephone number is (571) 272-1345. The examiner can normally be reached on MONDAY-THURSDAY, 7:30-6:00.
